SUMMARY

Cybersecurity student with strong hands-on experience in penetration testing, digital forensics, and web application security. Skilled in identifying vulnerabilities, analyzing attack patterns, and supporting cybercrime investigations. Proficient in Python, Java, C++, API security, and machine learning, with practical expertise using Burp Suite, Wireshark, Autopsy, Kali Linux, and other security tools. Known for strong analytical thinking, problem-solving, and incident-response capabilities, with a focus on building secure, scalable, and resilient systems.

EXPERIENCE

Cybersecurity Intern – Kerala Police Cyber Crime Department

June 2025

- Contributed to real-time investigations and assisted in digital evidence analysis using Autopsy, EnCase, and FTK.
- Supported cyber fraud and identity theft case resolution by performing OSINT investigations with Maltego and analyzing security logs and network data using Splunk and Wireshark.
- Worked with forensic tools to support law enforcement and conducted malware analysis to identify threats.

PROJECTS

Emotion Based Movie Recommendation System

December 2024

- Developed a recommendation system analyzing user preferences.
- Enhanced recommendation accuracy using structured datasets and advanced algorithms.
- Technologies: Python, React.js, Node.js

Deepfake Biometrics Detection System

May 2025

- Developed a CNN-powered real-time deepfake detection model combining facial biometrics and audio analysis (MFCCs).
- Integrated OpenCV, dlib, TensorFlow, and Keras for high-accuracy classification and tampering detection.
- Built GUI with Tkinter and optimized preprocessing for improved detection reliability.
- Tools/Tech: Python, TensorFlow, Keras, OpenCV, dlib, Librosa.

Advanced API Security & Threat Detection Framework

December 2025

- Designed an API security platform with JWT/OAuth2 authentication, MFA, secure session handling, and API key lifecycle management.
- Built an AI-enhanced threat detection engine integrating anomaly detection and threat-intelligence feeds for malicious IP blocking.
- Implemented intelligent rate limiting, Redis-based caching, audit logging, geolocation-based access rules, and automated vulnerability scanning.
- Tools/Tech: Python, Flask/Node.js, Redis, ML models, OWASP standards.

TECHNICAL SKILLS

- Programming & Development:
Python, Java, C/C++, React.js, SQL, MySQL, Web Development, AI & ML, Bash
- Cybersecurity Tools:
Kali Linux, Burp Suite, Wireshark, Nmap, Autopsy, FTK, EnCase, Volatility, Maltego, OSINT Tools, VirusTotal
- Security Domains:
Network Security, Digital Forensics, Web Application Security, Vulnerability Assessment, Penetration Testing, Malware Analysis, API Security, Cybersecurity Fundamentals

SOFT SKILLS

Teamwork | Time Management | Leadership | Effective Communication | Critical Thinking | Adaptability | Problem-Solving

LANGUAGES

English | Malayalam | Hindi | Tamil

CERTIFICATIONS & ACHIEVEMENTS

- Completed an internship on robotics at KODACY & SPACE in June 2022, gaining hands-on experience in automation and innovative robotic systems.
 - Participated in a CTF challenge organized by Toyota, solving complex cybersecurity problems. Gained hands-on experience in vulnerability analysis and ethical hacking techniques.
 - Completed Ethical Hacker internship offered by Networking Academy through the Cisco Networking Academy program in February 2025.
 - Completed IBM's Python for Data Science course, gaining hands-on experience in Python, NumPy, Pandas, data visualization, and real-world data analysis
-

EDUCATION

BTech + MTech in Computer Science Engineering (Cybersecurity) 2021 - 2026

School of Cybersecurity and Digital Forensics, National Forensics Science University, Delhi Campus
