

VISHNULAL N

Cybersecurity · Digital Forensics · Full-Stack Development

Kondotty, Kerala, India | +91 9539124135 | vishnulalnerayathiri@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Aspiring Cybersecurity Analyst and Digital Forensics professional with hands-on experience gained through a cybercrime internship with the Kerala Police Cyber Crime Department. Skilled in digital evidence analysis, OSINT investigations, malware analysis, SAST, and secure full-stack application development. Proficient with industry-standard tools including Autopsy, EnCase, Splunk, Wireshark, and Burp Suite. Seeking entry-level roles in SOC analysis, digital forensics, or application security.

EXPERIENCE

Cybersecurity Intern | Kerala Police Cyber Crime Department

June 2025 – July 2025

- Assisted in real-time investigations and digital evidence analysis using Autopsy, EnCase, and FTK.
- Conducted OSINT investigations using Maltego and supported resolution of cyber fraud and identity theft cases.
- Analysed security logs and network traffic using Splunk and Wireshark to identify threat indicators.
- Performed malware analysis to classify and document threats in support of law enforcement operations.

PROJECTS

AI-Powered Static Application Security Testing (SAST) Tool

April 2026

Tech Stack: Python (FastAPI), Next.js 14, TypeScript, PostgreSQL, Redis, Celery, OpenAI GPT-4, Docker, GitHub Actions

- Built a full-stack SAST platform combining AST-based analysis with GPT-4 to detect 8 vulnerability types — SQL Injection, XSS, Command Injection, Hardcoded Secrets, Weak Crypto, Insecure Deserialization, Unsafe Eval, and Path Traversal.
- Implemented taint analysis for data-flow tracking (source-to-sink) and integrated CVSS scoring to generate risk-aggregated PDF executive reports with visualised remediation steps.
- Integrated GitHub OAuth, automated PR comment scanning, and CI/CD pipelines via GitHub Actions, enabling continuous security feedback within developer workflows.

Advanced API Security & Threat Detection Framework

December 2025

Tech Stack: Python, Flask/Node.js, Redis, Machine Learning

- Designed a secure API platform with JWT/OAuth2 authentication, MFA, and secure session handling, following OWASP security standards throughout.
- Implemented an AI-based anomaly detection module to identify malicious API usage patterns in real time.
- Integrated rate limiting, Redis caching, audit logging, IP blocking, and geolocation-based access control; automated vulnerability scanning reduced manual review time significantly.

Deepfake Biometrics Detection System

May 2025

Tech Stack: Python, TensorFlow, Keras, OpenCV, dlib, Librosa

- Built a real-time deepfake detection system combining CNN-based facial biometrics and audio analysis to identify tampered digital media.
- Improved preprocessing pipeline and detection reliability, achieving high-confidence classification for security-focused use cases.

Emotion-Based Movie Recommendation System

December 2024

Tech Stack: Python, React.js, Node.js

- Developed a full-stack recommendation engine that analyses user preferences and emotion signals to deliver personalised movie suggestions.
- Improved recommendation accuracy through structured dataset curation and algorithm optimisation across both backend and frontend components.

TECHNICAL SKILLS

Cybersecurity: Network Security, Web Application Security, Vulnerability Assessment, Penetration Testing, Malware Analysis, SAST, API Security, Security Monitoring, Incident Analysis

Digital Forensics: Digital Evidence Analysis, Log Analysis, Network Traffic Analysis, OSINT Investigation, Media Tampering Detection

Development: Python, Java, C/C++, TypeScript, React.js, Next.js, Node.js, FastAPI, SQL/MySQL/PostgreSQL, REST APIs, Docker

Security Tools: Kali Linux, Burp Suite, Wireshark, Nmap, Splunk, Autopsy, FTK, EnCase, Volatility, Maltego, VirusTotal

CERTIFICATIONS & ACHIEVEMENTS

- Ethical Hacker Certification – Cisco Networking Academy (February 2025)
- IBM Python for Data Science Certification (February 2025)
- Participated in Toyota CTF Challenge (Vulnerability Analysis & Ethical Hacking)
- Robotics Internship – KODACY & SPACE (June 2022)
- Deloitte Cyber Job Simulation Certificate (April 2026)
- Certified Cyber Security by ISC2 (May 2026)
- Certified Professional Cyber Security By Google (May 2026)

EDUCATION

B.Tech + M.Tech (Integrated) – Computer Science Engineering (Cybersecurity) 2021 – 2026

School of Cybersecurity and Digital Forensics, National Forensics Science University – Delhi Campus

CGPA: 8.54 / 10

LANGUAGES

English · Malayalam · Hindi · Tamil
